WhipUp Online Portfolio Builder

Submitted to:

Prof. Lydia Jane G

Slot: B2/L21+L22

Submitted by: Charizma Gupta 17BCI0157

Online Portfolio Builder

Users will be capable of signing up, logging in and hosting their portfolios on the website.

They will just have to edit a pre-existing template portfolio to reflect their own work by uploading project links and writing appropriate descriptions.

Node.js, Express & MongoDB were used to build the backend. **POSTMAN** was used to help with testing the backend while the frontend hadn't been fully developed.

React & Redux were used to build the backend.

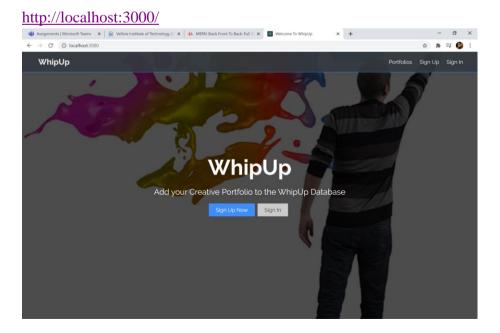

What I learned while developing WhipUp:

- Building an extensive backend API with Node.js & Express
- Protecting routes/endpoints with JWT (JSON Web Tokens)
- Extensive API testing with Postman
- Integrating React with our backend in an elegant way, creating a great workflow
- Building a frontend to work with the API
- Using Redux for app state management
- Creating reducers and actions for our resources
- Creating many container components that integrate with Redux
- Testing with the Redux Chrome extension

Functionalities

- 1. Sign In/Sign Up
- 2. View all Portfolios
- 3. Create/Edit your own Portfolio
- 4. Add/Edit Projects
- 5. Add/Edit Title, Tags and Description for each individual project
- 6. Has a Page Not Found result for an unknown url

Website's DB

The NoSQL Database of MongoDB has been used.

Code

SERVER SIDE

server.js

```
const express = require('express');
const connectDB = require('./config/db');

const app = express();

//Connect Database
connectDB();

//Init Middleware
app.use(express.json({ extended: false }));

app.get('/', (req, res) => res.send('API Running'));

//Define Routes
app.use('/api/users', require('./routes/api/users'));
app.use('/api/auth', require('./routes/api/auth'));
app.use('/api/profile', require('./routes/api/profile'));

const PORT = process.env.PORT || 5000;
```

```
app.listen(PORT, () => console.log(`Server started on Port ${PORT}`));
```

Profile.js

```
const mongoose = require('mongoose');
const ProfileSchema = new mongoose.Schema({
 user: {
    type: mongoose.Schema.Types.ObjectId,
    ref: 'user',
  },
  company: {
    type: String,
  },
  website: {
    type: String,
  },
  location: {
    type: String,
  },
  status: {
    type: String,
    required: true,
  },
  skills: {
    type: [String],
    required: true,
  },
  bio: {
   type: String,
  projects: [
      img: {
        data: Buffer,
        contentType: String,
      },
      title: {
        type: String,
        required: true,
      },
      tags: {
        type: [String],
        required: true,
```

```
date: {
        type: Date,
      description: {
        type: String,
        required: true,
      },
      link: {
       type: String,
      },
    },
  ],
  social: {
    linkedin: {
      type: String,
    },
    facebook: {
      type: String,
    },
    instagram: {
      type: String,
    },
    dribbble: {
      type: String,
    },
    behance: {
      type: String,
    },
    youtube: {

    },
  },
  date: {
    type: Date,
    default: Date.now,
 },
});
module.exports = mongoose.model('profile', ProfileSchema);
```

User.js

```
const mongoose = require('mongoose');
```

```
const UserSchema = new mongoose.Schema({
  name: {
    type: String,
    required: true,
  },
  email: {
    type: String,
    required: true,
    unique: true,
  },
  password: {
    type: String,
    required: true,
  },
  avatar: {
    type: String,
  },
  date: {
    type: Date,
    default: Date.now,
 },
});
module.exports = User = mongoose.model('user', UserSchema);
```

CLIENT SIDE

index.js

```
import React from 'react';
import ReactDOM from 'react-dom';
import App from './App';

ReactDOM.render(<App />, document.getElementById('root'));
```

App.js

```
import React, { Fragment, useEffect } from 'react';
import { BrowserRouter as Router, Route, Switch } from 'react-router-dom';
import Navbar from './components/layout/Navbar';
import Landing from './components/layout/Landing';
import Routes from './components/routing/Routes';
import { LOGOUT } from './actions/types';
```

```
import { Provider } from 'react-redux';
import store from './store';
import { loadUser } from './actions/auth';
import setAuthToken from './utils/setAuthToken';
import './App.css';
const App = () => {
  useEffect(() => {
    if (localStorage.token) {
      setAuthToken(localStorage.token);
    store.dispatch(loadUser());
   window.addEventListener('storage', () => {
      if (!localStorage.token) store.dispatch({ type: LOGOUT });
   });
  }, []);
  return (
    <Provider store={store}>
      <Router>
        <Fragment>
          <Navbar />
          <Switch>
            <Route exact path="/" component={Landing} />
            <Route component={Routes} />
          </Switch>
        </Fragment>
      </Router>
    </Provider>
 );
};
export default App;
```

store.js

```
import { createStore, applyMiddleware } from 'redux';
